

# SECURE HARDWARE

## Physical Asset Protection

No one without proper permissions should have physical access to an organization's information systems. Compliance requires it. Proper security mandates it. We have secured information in combat zones, locations impacted by disasters, pandemics/epidemics. Also, we secure hardware for various industries that require compliance, such as medical, financial, legal, etc.

### OUR DEAL:

## Always Be Compliant

Gates, card readers, locks, cameras, pin pads, push-button access, printing control systems, lights, obscurity, and more are required for protecting the physical location of information systems.

It is true that a piece of paper or digital document cannot stop a criminal from physically breaking in. However, policies are required when companies are trying to be compliant.

## Secure Hardware First

**We will be happy to protect your environment from bad actors. Contact us.**
